*All Computer Industry Profile statistics were prepared for *Computerworld* by International Data Corporation, the leading market research firm in the computer field.

By the end of 1970, the total value of U.S. manufactured EDP equipment will reach \$37 billion. That's a worldwide gain of almost three times in five years . . . and over 15 times in 10 years. And it's reliably predicted that by the end of the decade, a computer or at least a computer terminal, will be in use at most firms in this country with 20 employees or more.

The impact caused by the rapidly spreading applications of computers will surely increase its effect on you, your job and your responsibilities.

And we're sure that *Computerworld* and our Computer Industry Profile will play a vital role in helping you with both your present planning and your future decisions.
